

LI ZHUOFEI

lizhuofei@connect.hku.hk | [GitHub](#) | [LinkedIn](#) | [lizhuofei.com](#)

HKU Statistics undergraduate with interests in statistics and data science, looking for early research opportunities.

EDUCATION

The University of Hong Kong

Sep 2025 - Jun 2029

Bachelor of Statistics | Professional Core: Statistics, Minors in Computer Science and Finance

- CGPA: 3.85/4.3
- Selected coursework: Linear Algebra (A+), Programming Technologies (A+), Multivariable Calculus (A), Statistics: Ideas and Concepts (A)

Peking University Summer School International (PKUSSI)

Jul 2026

Beijing, China

- Coursework: An Introduction to International Organizations Law; Introduction to Chinese Economy

EXPERIENCE

CAS Investment Management

Jun 2026

Analyst Intern | Early-stage PE/VC firm specializing in frontier technology

- Participated in management interviews for a prospective Series B airborne synthetic-aperture radar (SAR) investment, supported by prior corporate background research.
- Attended post-investment follow-ups and shareholder meetings across perovskite photovoltaic and RSV vaccine portfolio companies, gaining exposure to follow-on financing discussions.
- Built a working understanding of the full PE/VC investment cycle (deal evaluation, post-investment management, shareholder governance, and pre-IPO preparation) through direct observation and self-study.

LEADERSHIP & PROJECT EXPERIENCE

AirHelper

Mar 2026 - May 2026

Team Leader | HKU CCAI9028 Course Project

github.com/lizhuofei-felix/air-helper

- Led a small team building a FastAPI-based LLM air quality interpretation web app for elderly and vulnerable groups.
- Integrated real-time air quality and weather APIs with an LLM to generate context-aware explanations, recommendations, and risk alerts.
- Applied the vibe-coding practice taught in CCAI9028 to build the working prototype as an agent workflow: data retrieval, LLM interpretation, and advice generation as discrete steps.

Shelter Seconds: Terminal Survival Game

Jan 2026 - May 2026

Team Leader | HKU COMP2113 Course Project

github.com/lizhuofei-felix/comp2113-text-game

- Led a five-person team building a text-based post-apocalyptic survival game in C++ for Linux terminals, organized into seven modular components compiled with a Makefile.
- Implemented core gameplay: a timed scavenging phase, a day-by-day survival loop tracking hunger, thirst, and resources, and a random event engine.
- Added a five-slot save/load system using file I/O and three difficulty modes governing starting resources, event frequency, and win conditions.

SKILLS

Technical: Python (NumPy), C++, Bash **Analytical:** Statistical inference, Regression

Languages: Mandarin (native), English (fluent)
